**Industry**

Construction

**Country**

New Zealand

**Business situation**

As its business grew, Naylor Love needed a better, faster way to manage workplace safety hazards.

**Solution**

Workers now can access a Nintex form on their phones to report hazards. Nintex Workflow directs the information to the relevant managers for action.

**Benefits**

Better risk mitigation, with more hazards reported faster and more accurately. Easy adoption thanks to simple, intuitive design. Extends the company's existing Investment in Microsoft Office 365.

# Maintaining great safety record, while growing in size and complexity

*“Thanks to the Nintex Workflow Platform, we’re getting more information and more accurate information on hazards than ever. We address hazards faster, so we can send our people home safely at the end of the day.”*

— **Lee Harris**, Systems Administrator  
for Naylor Love

New Zealand’s Naylor Love Construction has a great safety record—and it wants to keep it that way. That’s become more challenging as the company has grown in size and complexity. More employees and more projects in more cities across the country create the potential for more accidents.

Naylor Love tracks jobsite hazards to address them before they result in injury. But busy construction workers found it cumbersome to obtain the right form from a job office, take them to the hazard site, record the problem, then return to the office to file the form. Failure to do so could increase risks not only to co-workers but also to Naylor Love and its clients, especially given stringent safety regulations.

# Needed: mobility, speed, automation—and integration with Office 365

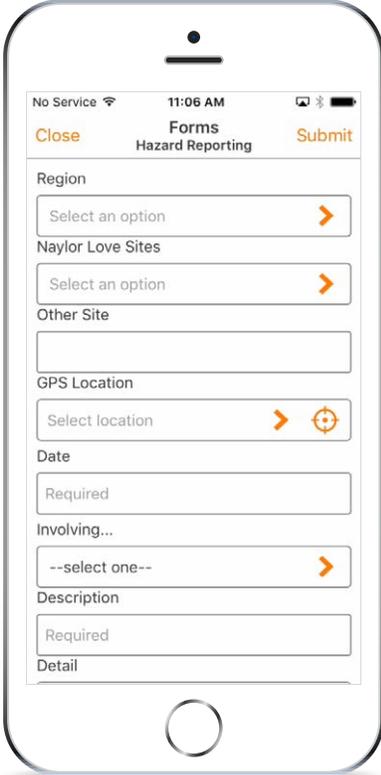

Naylor Love knew what it needed: an automated health and safety management solution that would work at remote jobsites; enable hazards to be reported thoroughly, accurately, and quickly; and automate workflows to get hazards addressed promptly. The solution also needed to integrate with the company's Microsoft Office 365 deployment to take full advantage of that investment.

With the help of solution provider Provoke, Naylor Love adopted Nintex Workflow for Office 365, Nintex Forms for Office 365, and Nintex Mobile. Naylor Love used the Nintex Workflow Platform's drag-and-drop design canvas and business logic to create a form and a simple workflow in a day, and a full prototype in a week. It deployed the final version a few weeks later, after receiving input from employees.

# The Nintex Platform meets all their needs at Naylor Love

Workers from carpenters to site managers now can access the Nintex digital health and safety form on their phones, so they're never without it. Drop-down fields show only relevant information, making it fast and easy to report a hazard. The solution also ensures consistent hazard reporting across all project sites. Incident reports are automatically directed to the appropriate manager or managers for action. Managers and executives have intuitive dashboards for real-time aggregated and trend data for analysis and decision-making, thanks to the integration with Office 365 and Power BI.

"Thanks to the Nintex Workflow Platform, we're getting more information and more accurate information on hazards than ever," says Lee Harris, Systems Administrator for Naylor Love. "We can spot trends faster with real-time information from across the country being logged and analyzed quicker than normal paper-based systems, so we can send our people home safely at the end of the day."

*Nintex Mobile makes it easy to report site hazards and drive immediate action.*

*“The more our people see Nintex forms on their phones and tablets, the more they come to us and ask if we can ‘Nintex’ their other challenges too.”*

— **Lee Harris**, Systems Administrator for Naylor Love

### **“Please Nintex that for me”**

Broad employee adoption is one reason for that success. “The adoption has been great,” says Harris. “Our people like that they can access this quickly wherever they are, create a hazard report with a few clicks, and get right back to work. We’re seeing more diverse reports because more workers at all levels of the company are submitting forms.”

Naylor Love has also created Nintex forms and workflows for accident reporting, expense claims, payment approvals, fringe-benefit taxes, onsite inspections, quality control, tool tracking and management, and more.

#### **About Nintex**

Nintex is the global standard for process management and automation. Today more than 10,000 public and private sector organizations across 90 countries turn to the Nintex Platform to accelerate progress on their digital transformation journeys by quickly and easily managing, automating and optimizing business processes. Learn more by visiting [www.nintex.com](http://www.nintex.com) and experience how Nintex and its global partner network are shaping the future of Intelligent Process Automation (IPA).
